Journal of Crystal Growth 192 (1998) 480–481

JOURNAL OF CRYSTAL GROWTH

Subject index

Apparatus
– for determining substrate orientation 456
– for protein growth 282
– for zone melting 410

Computer simulation
– of thermocapillary convection 335
Constitutional supercooling
– of germanium silicon 125
Convection 63, 328, 335

Dendritic growth
– of aluminum copper alloy 300
– of nickel copper alloy 462
Device characterization
– electronic materials 84, 89, 430
– lasers 56, 381, 448
– quantum dots and wires 89
– quantum wells 363
Diffusional control
– of crystal growth 185, 225
– of heat flow control 328

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 1, 63, 410, 417

Hydrodynamics, see Convection

Kinetics
– of growth 18, 33, 97, 185, 200, 225, 300, 402, 430, 439, 448
– of interface control 56
– of nucleation 395, 448

Lasers, see Device characterization

Melt growth technique
– by Bridgman–Stockbarger method
– – of BSCCO 136
– – of cadmium zinc telluride 196
– – of gallium antimonide 63
– – of germanium silicon 125
– – theory of growth under strong, low frequency rotating magnetic field 318
– by Czochralski method
– – of indium phosphide 1
– – of silicon 117
– – of $Tb(Fe,Ti)_{12}$ 417
– by floating zone method
– – of calcium boron 346
– – of palladium 410
– – of YB_{66} 141
– by gradient freezing method 354
– by top seeded solution
– – of zinc magnesium yttrium quasicrystals 152
Microgravity, growth under
– of gallium antimonide 63
– of horizontal growth 328
Morphological stability
– of aluminum copper alloy 300
– of cadmium telluride on gallium arsenide 109
– of dendritic crystals 462
– of germanium–germanium silicon interface 125
– of L-glutamic acid 225
– of silver bromide 215

Nucleation
– of calcium oxalate 448
– of calcium oxalate monohydrate 243
– of lysozyme 257, 271
Numbers
– Grashof 328
– Hartman 318
– Marangoni 335
– Sherwood 328

Phase diagrams, of
– $Tb(Fe,Ti)_{12}$ 417
Precursor, for
– aluminum gallium arsenide 79
– nickel zinc ferrite 423
Purification
– of palladium 410

Solution growth technique
– by benzene thermal growth

PII: S0022-0248(98)00633-2

– – of gallium phosphide 89
– by flux method
– – of meta-nitroaniline 236
– by gel method
– – of lysozyme 257, 271
– – of zinc oxide 430
– by hydrothermal growth
– – of calcite 350
– by low temperature method
– – of L-glutamic acid 225
– – of lepidocrocite 250
– – of magnetite 250
– – of n-paraffin 307
– – of sucrose 290
– by vapor diffusion
– – of lysozyme 282
– – of trichosanthin 282
– theory of crystal morphology 236
Superconductivity materials, high T_c
– bulk
– – of BSCCO 136
Superlattices, multilayers
– of indium gallium arsenide/gallium arsenide on boron 363
Surface energy determination
– of L-glutamic acid 225
Surface structure
– of ammonium dihydrogen phosphate 200
– of indium antimonide 84
– of n-paraffin 307
– of palladium 410

Thin film growth, epitaxy
– by hydride method
– – of gallium arsenide on silicon 23
– – of indium phosphide 402
– by liquid phase epitaxy
– – of gallium arsenide on silicon 18, 23
– – of indium phosphide 11
– – of lepidocrocite 250
– – of magnetite 250
– by metalorganic molecular beam epitaxy
– – of indium phosphide 56
– by molecular beam epitaxy
– – of aluminum gallium nitride 93, 471
– – of gallium arsenide 33, 97, 363
– – of gallium nitride 93
– – of gallium nitride on silicon carbide 28
– – of indium arsenide 97, 376
– – of neodymium fluoride 157
– – of thallium phosphide 372
– – of zinc selenide 102
– – theory of dislocation density 28
– by pulsed laser deposition
– – of cerium oxide 175
– by sputtering
– – of platinum on magnesium oxide 164
– by vapor phase epitaxy
– – through evaporation and condensation
– – – mercury cadmium iodide 342
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium arsenide 79
– – – of cadmium telluride on gallium arsenide 109
– – – of gallium arsenide on silicon 23
– – – of indium gallium arsenide 47
– – – of indium gallium arsenide nitride 381
– – – of iron oxide 423
– – – of nickel ferrite 423
– – – of nickel oxide 423
– – – of nickel zinc ferrite 423
– – – of zinc ferrite 423
– – – of zinc oxide 423

Vapor growth technique
– by chemical transport
– – of gallium nitride 73
– by evaporation and condensation
– – of mercury cadmium iodide 342
– – of zinc selenide 386
